

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

To return to our Newfoundland bird, the characters discussed above were all duly noted. It remains to add that the weather was extraordinarily hot, over 90°, and that a strong southwest gale had been blowing for two days.—LUDLOW GRISCOM AND E. R. P. JANVRIN, M. D., *New York City*.

The Old Squaw (*Harelda hyemalis*) at San Diego, Calif.—In 1896 the late Lyman Belding shot an Old Squaw in San Diego Bay, the capture being recorded in 'The Auk,' by the undersigned as being the most southerly record for the species on the Pacific coast. For 24 years this remained the only recorded capture of the species so far from its normal winter habitat. We now, however, have several records that would seem to indicate that this duck might be of more frequent occurrence than was supposed. On January 4, 1920, a female was taken on Mission Bay and on December 3, of the same year a male was shot at the same place. Again on the 2nd and 19th of November, 1921, two females were taken, four records in all for the same body of water and all by Mr. Ad. Pearson, a local sportsman-naturalist. Mission Bay, which appears on most maps as False Bay, is about a mile north of San Diego Bay and is an extensive body of shallow water offering unusual attractions for water and shore birds. Mr. Pearson has shot over these waters for the past 35 years and states that he has not seen any of these ducks prior to January 1920.—A. W. ANTHONY, *Natural History Museum, San Diego, Calif.*

King Eider (*Somateria spectabilis*) in Southern Michigan.—The note in the July 'Auk' of the occurrence of King Eiders near Detroit reminds me that a specimen came into my hands in November, 1911. It was a young male and was shot out of a small flock on Gun Lake, Barry County, Mich. The skin is now in the museum of the University of Michigan.—W. E. PRAEGER, *Kalamazoo, Mich.*

Sheldduck (*Tadorna cascarca*) in Massachusetts.—Last October Deputy Fish and Game Commissioner, Carl E. Grant, of Gloucester, brought in to me a Sheldduck (*Tadorna cascarca*) in the flesh, a young female killed October 5, 1921, near the mouth of Essex River, Ipswich Bay, Essex County, Mass., by a sea captain of Gloucester, Howard H. Tobey. He states that when first seen, it was alone over his decoys about half a mile from shore and was very shy. The bird was somewhat pin feathered and had not quite finished molting, although its wings consisted entirely of new feathers. There were one or two rectrices missing, perhaps three, and three more only partly grown.

The question at once arises whether this bird had escaped from captivity. I looked the plumage over very carefully and its perfect condition indicated that the bird had not been in captivity, at least since the molt.

The specimen will be presented to the Peabody Museum. A description
